## LANGUAGES

English

## PROFILE

Results-driven Front End Developer with 1 year of hands-on experience in a B2B SaaS environment, specializing in React.js to build responsive, high-performance user interfaces. Skilled at integrating modern AI-powered tools to streamline development workflows, enhance code quality, and accelerate feature delivery. Passionate about creating intuitive user experiences that drive business value.

--------------------------------------------------------------------------------------------------

## EXPERIENCES

### Adak company

https://adak.ir/

- 1 year experience in adak company
- Adak, a B2B software provider specializing in integrated enterprise solutions for mid-sized and large businesses.
- Develops ERP, CRM, and BPB (Business Process Automation) applications to streamline operations and workflows.
- Delivers cloud/hybrid platforms for unified data management, process optimization, and digital transformation.
- Targets B2B clients with modular tools to enhance efficiency, real-time insights, and system integrations.

### vira segal karo

3 months of internship

- Developed responsive web interfaces using React.js
- Implemented UI components from designs to production
- Fixed bugs and improved app performance
- Used AI tools to write cleaner, faster code
- Collaborated with team on real client features

# P R O J E C T S
-------------------------------------------------------------------------------------------------

### B2B website

https://adak.ir/

1 year experience in adak b2b company

- a b2b website for company customers
- using next.js and typescript
- using storybook to make components

### Blueprint – Organizational Process Design and Building Tool (Similar to Pega Blueprint)

- Developed the front-end for an advanced tool similar to Pega GenAI Blueprint for rapid design of workflows, Case Lifecycle, and business processes.
- Enabled process definition using natural language input, with AI-driven automatic suggestions for steps, data, and roles (Personas).
- Implemented using React.js / Next.js + TypeScript + Tailwind CSS.
- Focused on team collaboration, reducing initial design time, and accelerating the development of enterprise applications in a B2B SaaS environment.

### Tasklist – PWA for Task and Organizational Process Management

- Developed a Progressive Web App (PWA) for managing tasks, workflows, and business processes.
- Similar to advanced tools like Camunda Tasklist, featuring task viewing, claiming, completion, and interaction with process forms.
- Fully responsive and offline-capable implementation using React.js / Next.js + TypeScript + Tailwind CSS.
- Emphasized simple and fast user experience for organizational users in a B2B SaaS environment.
- Organizational project for Adak Company.

### Social media web app

full stack project

- using prisma orm
- using next.js and typescript for frontend and backend
- using postgress database

### Blog GraphQl

with React js (simple practical project)

- using hygraph to make a database
- using MUI to design the project
- use graphQl

### Divar Website

final project of react tutorial

- using real backend and have experience with swagger
- using authorization and authentication concept (with cookies)
- using react-query
- use React-Hook-Form
- use TailwindCss for styles
- use Context for managing states

### Shopping Cart

with React js (simple practical project)

- using Hooks like useState,useEffect , ...
- using Routing (react-router-dom 6 )
- using Redux-toolkit to manage states

## other knowledges

have experience with .....

- json-server library
- storybook
- axios library
- redux and redux-toolkit
- graphQl
- react-query
- daisyUi
- swiper
- sass
